\* We need to get  
id of add-at-index  
because it can disrupt the order

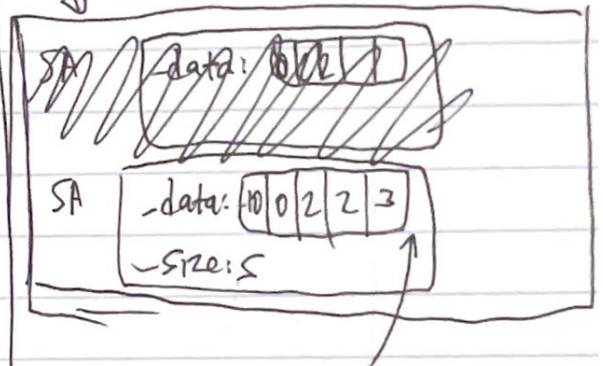

\* Also we need  
to get id of  
the fun of  
SA.set()

Foo.remove(1)

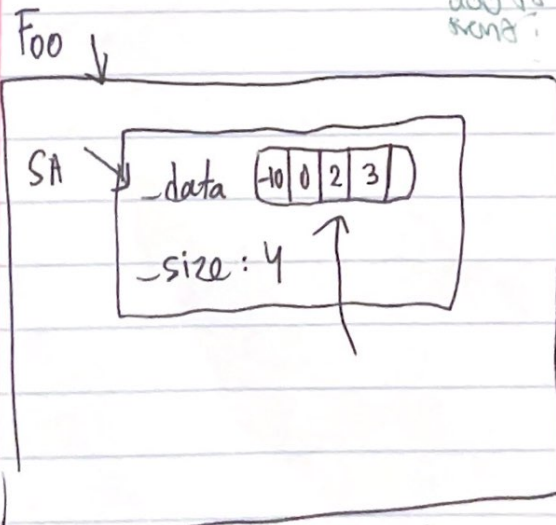

Foo.add(2)

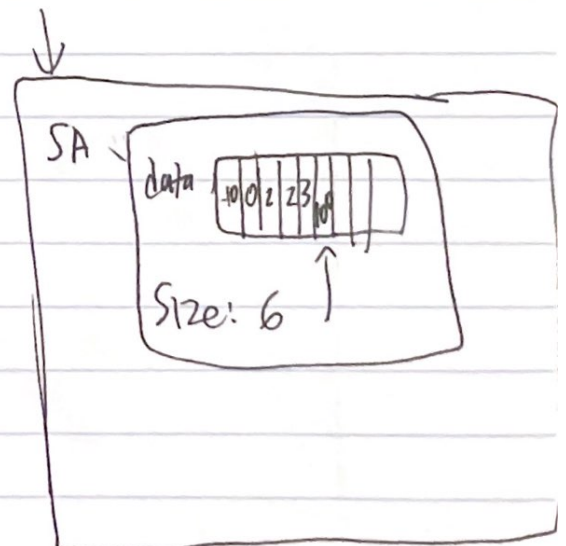

Foo.add(-10)

how does it  
add to the  
front?

Foo.add(100)

\* could elaborate more on the ascending aspect
